

Promptathon-icepot

Scenario 1

Test the search feature.

Missing Information

- What is being searched?
- Search input
- Where is the search done – feature/application?

ICEPOT Framework

- Instruction:** Test the search feature of the application.
- Context:** The application allows users to search for records using a search box. The search feature should return relevant results based on the user's input.
- Examples:** Include valid keyword, partial keyword, no-result, blank input, special-character, case-sensitivity, and numeric-search scenarios.
- Persona:** Act as an experienced QA Engineer specializing in functional and UI testing.
- Output:** Provide test scenarios with test steps, test data, and expected results. Include both positive and negative test cases.
- Tone:** Keep the response concise, structured, and professional.

Weak Prompt Result:

Test scenarios for the search feature:

TC	Scenario	Expected Result
TC01	Search with a valid keyword	Relevant results should be displayed

TC02	Search with an invalid keyword	No results should be displayed
TC03	Search with a blank value	Appropriate validation should be displayed
TC04	Search with partial keyword	Matching results should be displayed
TC05	Search using special characters	System should handle the input appropriately
TC06	Search with numbers	Relevant results should be displayed
TC07	Search with uppercase/lowercase	Results should be displayed according to search behavior

ICEPOT Prompt Result

TC ID	Scenario	Test Data	Expected Result	Type
TC01	Search using valid keyword	Portfolio	Relevant records containing the keyword are displayed	Positive
TC02	Search using partial keyword	Port	Records matching the partial keyword are displayed	Positive
TC03	Search with no matching result	XYZ123	Appropriate "No results found" message is displayed	Negative
TC04	Search with blank input	Blank	Appropriate validation/message is displayed or search is prevented	Negative
TC05	Search using special characters	@#\$\$%	Application handles the input without errors	Negative
TC06	Search with different letter case	portfolio / PORTFOLIO	Results are returned according to the application's case-sensitivity rules	Positive
TC07	Search using numeric value	50000	Relevant records are displayed if numeric search is supported	Positive
TC08	Search with leading/trailing spaces	Portfolio	Application handles spaces appropriately and returns relevant results	Positive
TC09	Clear search criteria	Valid search → Clear	Search field is cleared and default results/state is restored	Positive
TC10	Search repeatedly with different keywords	Portfolio → Account	Results are refreshed correctly for each new search	Positive

The biggest improvement

The weak prompt makes the **AI guess**:

"What kind of search? What scenarios? What output?"

The ICEPOT prompt reduces the amount of guessing by providing those details.
